F819/829 Full Bore Firesafe Flanged Ball Valves

from cast or wrought material. All valves are

supplied with stainless steel interflange

media comply with N.A.C.E. MR.01.75

bolting. All components in contact with the

With the new Series 819/829 designed to BS 5351, Worcester Controls brings to the market a full bore valve which combines low cost of ownership and long service life with high operational safety and a range of features which now sets the standards for others to follow.

PTFE coated graphite as standard

contamination (50mm and above)

seal (15-40mm)

for firesafe integrity eliminates media

PTFE with metal to metal secondary

What remains unchanged however is Worcester Controls' total dedication to quality and service support. All of this is the result of following one simple strategy – to listen and respond to the needs of our customers.

Wrench **Anti-blowout stem** Ergonomically designed for ease Inserted from inside of valve of operation. Wrench can be fitted at **Actuator mounting** body for greater safety mid or end position to suit space Conforms to ISO 5211 requirements (50mm and above) for ease of actuation Locking clip **Anti-static stem** Maintains position of gland Ensures electrical continuity nut during actuation for long between ball and body leak-free performance Gland nut **Seats** Does not need to be removed Wide range of seat materials for actuator mounting thereby to suit customer applications maintaining valve integrity Ball 316 stainless steel as standard with pressure equalising hole to balance Stop plate cavity pressure with line pressure Remains fitted during actuation for visual when valve is open. Parallel ported indication of ball position (50mm and above) ball maximises flow and minimises pressure drop Flange connectors Integral to body complying with all major Seat design international standards or alternatively to Cavity pressure relieving (CPR) seats meet specific customer needs ensure that pressure generated through media expansion when the valve is closed is safely relieved upstream **Materials of construction** Body and end connector are manufactured **Body seals**

Bolting

To meet the requirements

of ASME VIII: 19981 Div.1

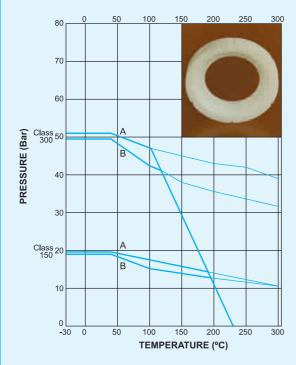

pressure vessel codes

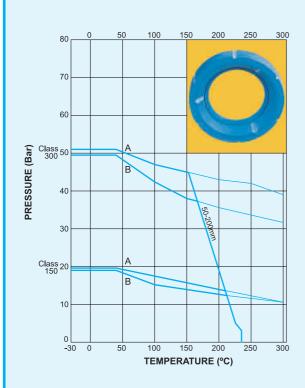

PRESSURE/TEMPERATURE RATINGS

PTFE SEATS (T)

Virgin PTFE is the most common sealing material and is suitable for almost all media as it has excellent chemical resistance.

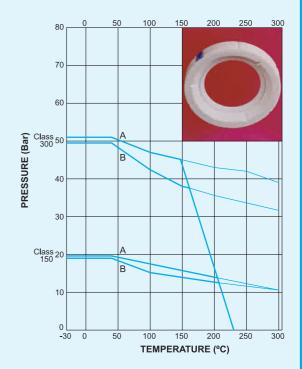

25% GLASS FILLED PTFE (H)
Glass re-inforced PTFE material offering a greater pressure / temperature capability than the R seat.

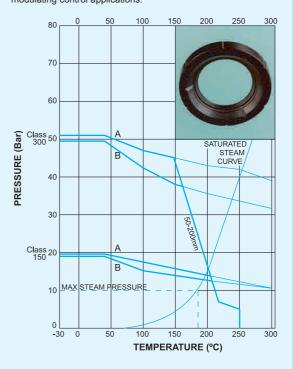

15% GLASS FILLED PTFE (R)

Glass re-inforced PTFE seats are stronger than virgin and have higher pressure/temperature ratings. Chemical resistance as per virgin PTFE.

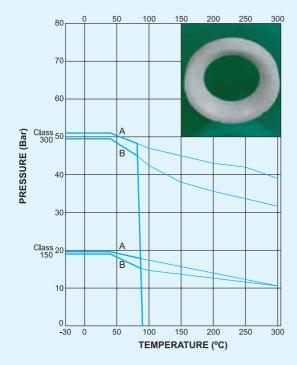

FLUOROFILL (P)
Carbon, glass and graphite filled PTFE material, an excellent seat material for steam and thermal services. Due to its high cycling capabilities, it is the recommended soft seat for modulating control applications.

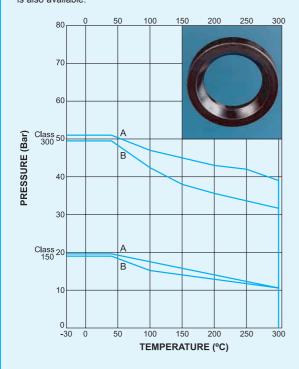

UHMWPE (U)

Ultra High Molecular Weight Polyethylene offers good performance characteristics in applications where PTFE is not suitable (for example on tobacco duty). It also has good abrasion resistance.

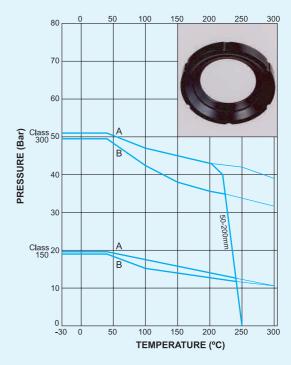

METAL - ALPHA (N)

A 316L sintered metal seat impregnated with PTFE, this material combines the strength and abrasion resistance of metal with the lubrication properties of PTFE. A graphite-impregnated metal seat is also available.

PEEK

PEEK is Poly Ether Ether Ketone, a material which demonstrates outstanding pressure capabilities at elevated temperatures. PEEK has excellent chemical and abrasion resistance.

KEY

A = Carbon Steel Body Rating
B = Stainless Steel Body Rating
(In accordance with BS1560)

IMPORTANT NOTE

The information given in the pressure/temperature graphs on pages 6/7 indicates the maximum performance capabilities of these seat materials. The full potential of virgin and re-inforced PTFE can be realised in the standard Worcester valve build. For more demanding applications requiring the greater pressure/temperature capabilities of the other seat materials, it is essential that the appropriate valve build is specified.

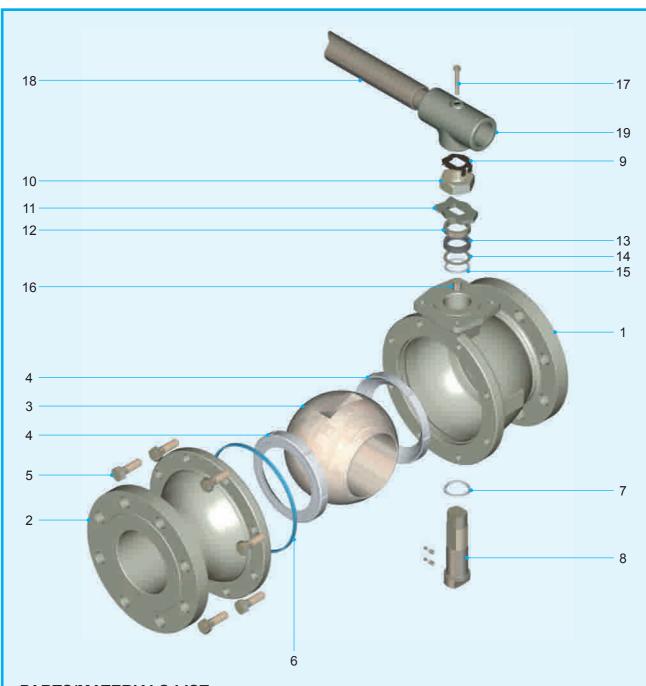

Examples of these applications include the following:

- Thermal Fluids (P221 Spec.)
- Nuclear Service
- Oxygen Service (Q822 Spec.)
- · Tobacco (Q858 Spec.)
- Ammonia (Q797 Spec.)
- · Helium (P043 Spec.)
- Toxic Chemicals (eg. Chlorine, Hydrogen Peroxide, Phosgene etc.) – Envirosafe Build
- Vacuum Service (P043 Spec.)

and many more.

To ensure that the correct valve is supplied, please consult Worcester Controls.

PRODUCT CODING

* 50 to 200mm valves are fitted with a secondary stem seal

NOTES

- 1. When wrench not fitted, flats on stem when parallel to pipeline axis denote open position.
- 2. Installation, Operating and Maintenance instructions are available on request.
- Limiting stem input torque figures are based on random practical laboratory tests.
 For critical applications where a guaranteed figure is essential, consult Worcester Controls.
- Compliance with ANSI B16.10 requires that 50, 80 and 100mm 819 valves are of shorter pattern face to face lengths than the earlier standard F96 series.

STANDARDS OF COMPLIANCE

Material

Valve Specification	BS 5351, valves for the petroleum industry. Lloyds Register type approved. Pressure Equipment Directive 97/23/EC
Flanges 819	BS 1560 Class 150
Flanges 829	BS 1560 Class 300
Face to Face Lengths	ANSI B16.10 as standard. 50, 80 & 100mm Class 150 to BS2080 optional. (See Note 4)
Pressure Test Specification	BS 6755 Part 1
Firesafe Specification	BS 6755 Part 2, ISO 10497, API 6FA, API 607 4th Edition
Quality Assurance	ISO 9000
Sour Gas Applications	NACE MR.01.75 (internal only)
